

# Achilles Tendons

## Proven Sterilisation without Irradiation

Achilles tendons allow for multiple techniques and fixation options in ligament reconstruction procedures. Achilles tendons distributed by Hospital Innovations are sterilised without the use of irradiation through the patented BioCleanse® Tissue Sterilisation Process, which inactivates or removes potential pathogens while maintaining the tissue's biomechanical properties.

### Achilles Tendon Benefits:

- Allows for multiple fixation techniques
- Minimises operating time and simplifies surgical technique as compared to autograft
- Eliminates donor site morbidity
- Multiple bone block options allow the surgeon to shape the graft into desired form and size at time of surgery

### Achilles Tendon Options:

Pre-shaped

Pre-trimmed

Conventional

# Achilles Tendons

Proven Sterilisation without Irradiation

## Pre-shaped Benefits

- Natural calcaneus bone block allows for multiple fixation types
- Pre-shaping of the bone block decreases theatre time

## Pre-trimmed Benefits

- Natural calcaneus bone block allows for multiple fixation types
- Larger pre-trimmed bone block provides flexibility for the surgeon to shape the bone to best fit the patient
- Excellent option for both primary and revision applications

## Conventional Benefits

- Natural calcaneus bone block allows for multiple fixation options
- Provides the largest bone block possible for use in various ligament reconstruction procedures (e.g. primary, revision, PCL, etc.)
