

Why settle for dry
and brittle cancellous
bone chips?

Preservon[®]
Fully hydrated cancellous
bone chips at ambient
temperature.

The Preservon® Advantage

FULLY HYDRATED AT AMBIENT TEMPERATURE.

Eliminates the need for lengthy thawing or rehydrating procedures.

STERILISED TO ENSURE PATIENT SAFETY.

All Preservon® treated cancellous bone chips are sterilised to a Sterility Assurance Level (SAL) of 10^{-6} via the Allowash XG® sterilisation process.

OPTIMAL PERFORMANCE.

The Preservon® process retains the biomechanical strength of the cancellous bone chips; avoiding the possibility of a brittle product.

		Pack Volume						
		5cc	15cc	20cc	30cc	40cc	60cc	90cc
Chip Size	0.1-2mm	✓	✓		✓			
	1-4mm	✓	✓		✓		✓	✓
	1-8mm	✓	✓	✓	✓	✓	✓	✓
	4-10mm		✓		✓		✓	✓

How Does Preservon® Work?

Preservon® treated cancellous bone chips are immersed in a glycerol based solution. These glycerol molecules replace the free-standing water content of the bone matrix; allowing the allograft to be preserved in a fully hydrated state whilst being stored at ambient temperature.
